DETAILED ACTION

Reasons for Allowance

Claims 1-5, 12-13,15-22 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a video apparatus comprising a digital decoder, a video source, a video encoder, a first video decoder, mixing unit.

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 1 is identifies the uniquely distinct feature for "mixing means coupled to the first video decoder and to the digital decoder able to mix the second digital stream and the first digital stream into an output digital stream to the video encoder, wherein the first video decoder provides a synchronizing signal to the digital decoder".

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 15 is identifies the uniquely distinct feature for "a mixing means connected to the first video decoder and to the digital processing unit for outputting to a video encoder an output digital stream generated from the first digital stream and the third digital stream, wherein the first video decoder provides a synchronizing signal to the digital decoder".

Watkins, US 7,111,319 discloses an apparatus comprising an audio/video decoder and a storage device. The audio/video decoder may be configured to receive (i) one or more uncompressed audio signals and (ii) one or more compressed

audio/video signals. The uncompressed audio signals may be tagged to the compressed audio/video signals and (ii) any of the one or more uncompressed audio signals and the one or more tagged compressed audio/video signals may be stored in the storage device and available for a playback relative to the tags.

Logan et al., US 5,371,551 discloses a broadcast recording and playback device employing a "circular buffer" which constantly records one or more incoming audio or video program signals and a microprocessor for accessing the memory to read a playback signal from the circular buffer to display programming material delayed from its receipt by a selectable delay interval. The circular buffer is implemented by a digital memory. Subsystem comprising the combination of a semiconductor RAM memory and a disk memory operated under the control of a microprocessor such that incoming signals are constantly recorded as received while, at the same time, delayed signals are being read from the memory subsystem at a different memory location selected by a microprocessor to provide a user-selected time delay. A plurality of input signal processors provides one or more programming signals to the memory subsystem in compressed digital form and a separate output signal processor converts the compressed digital information read from the memory into a form suitable for display. The audio/video buffer system operates under the control of a microprocessor which accepts commands from a remote command device or a connected host computer.

Iwasaki, US 6,154,604 discloses a video signal processor includes a decoder supplied with a playback signal formatted in accordance with the standards of National Television System Committee and producing a digital video signal with a vertical

synchronous frequency and a horizontal synchronous frequency satisfying a standard of Phase Alternation by Line Color Television System, an encoder connected to said decoder and producing said analog video signal with a color sub-carrier frequency satisfying another standard of said Phase Alternation by Line Color Television System and a signal generator supplying a clock signal and a color carrier signal regulating the horizontal synchronous frequency and the color sub-carrier frequency to the relation expressed as

$$fsc = [(1135/4) + (1/521)]f.sub.H$$

where fsc is said color sub-carrier frequency and f.sub.H is said horizontal synchronous frequency, and a moving picture reproduced from the analog video signal is free from color difference due to a dot crawling interference.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 2-5, 12-13, 16-22 are dependent on claims 1, and 15 and therefore dependent claims also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
